

# “Projection of climate change induced drought effects across the European continent”

**Authors:** Conradt, Tobias; Engelhardt, Henry; CROSSDRO project members

**Domain:** European continent

**Model:** SWIM

**Inputs:** Pan-European and global data, not the very high (1km) resolution

**Outputs to be analysed:** Hydrological and yield trends w.r.t. drought

**Status:** Model setup just started, data collection not yet concluded

**Challenges:** Missing details, e.g. reservoir operations; time constraints

**Next steps:** Model setup (spring) and calibration (summer 2022)
