An Urban Parametrization Scheme

- size of urban areas growing
- resolution of weather and climate models increasing
- *but*: computation cost too high to incorporate every single building
  $\Rightarrow$ simplified model required

An Urban Parametrization Scheme

- size of urban areas growing
- resolution of weather and climate models increasing
- *but*: computation cost too high to incorporate every single building
  $\Rightarrow$ simplified model required
- Parametrization Scheme by Martilli et al. (2002):

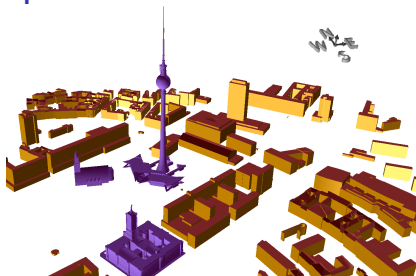

B building width

W street width
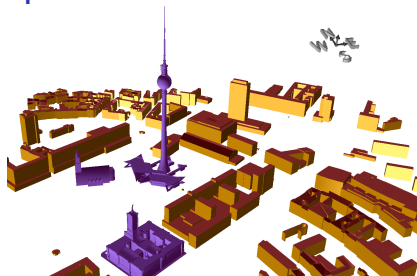

D canyon length

h height with probability $\gamma(h)$

z_i height of level i

Input Parameters

Input Parameters

Input Parameters

Building Width [m]
