

Modeling Climate Change in CA

Tackling climate change through increased regional cooperation

Dr. Bijan Fallah

fallah@pik-potsdam.de

Challenges

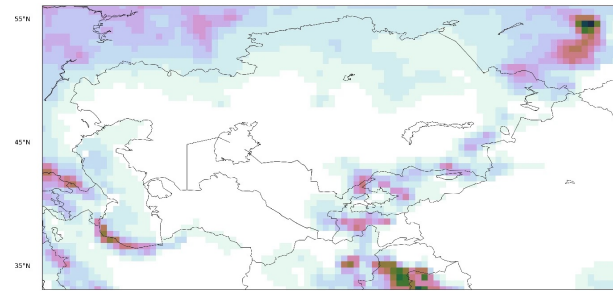

- Climate impact assessment needs local climate information

Global resolution

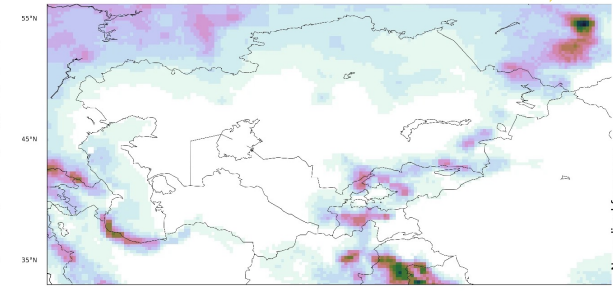

Regional resolution

(a) precipitation climatology for GFDL-ESM4_r1i1p1f1 model

(c) precipitation climatology from ISIP for the GFDL-ESM4_r1i1p1f1 model

(e) precipitation climatology for the ISIP-BASD GFDL-ESM4_r1i1p1f1 model

Challenges

- Climate impact assessment needs local climate information
- Central Asia has a sparse climate observation network

Challenges

- Climate impact assessment needs local climate information
- Central Asia has a sparse climate observation network
- **The topography of CA is very complex**

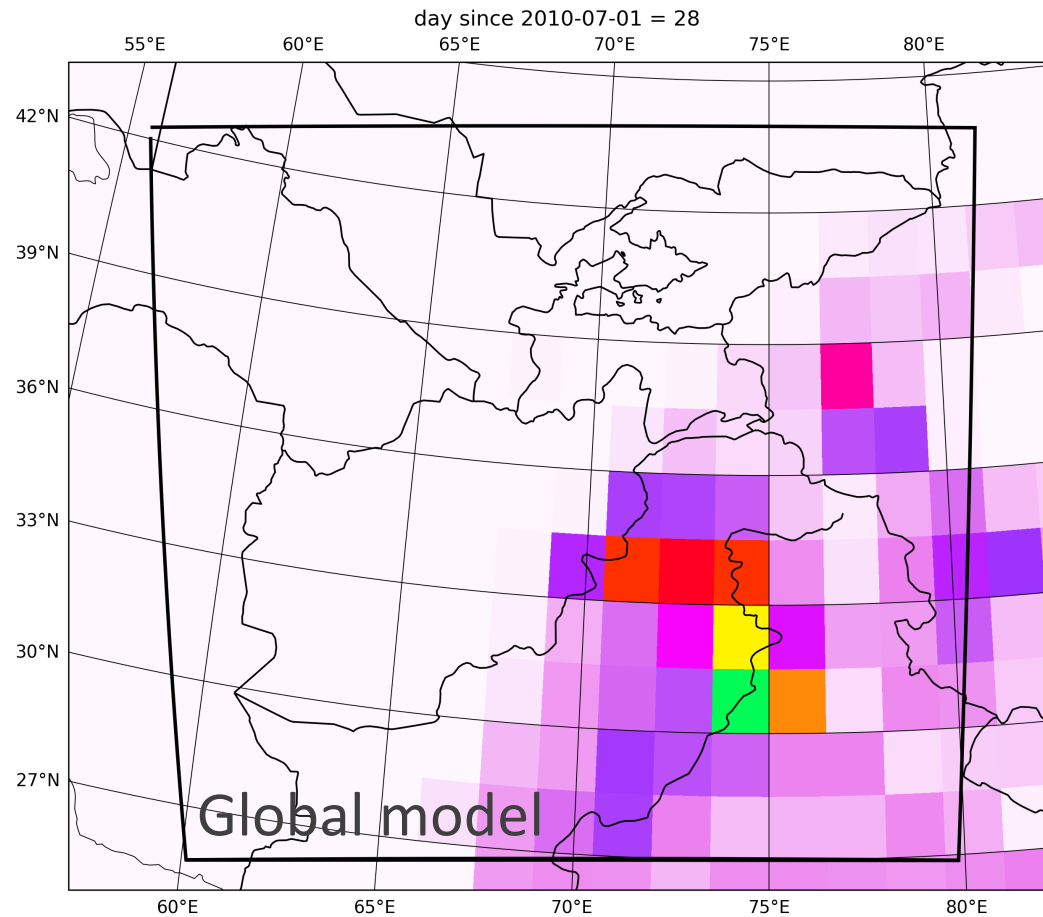

Challenges

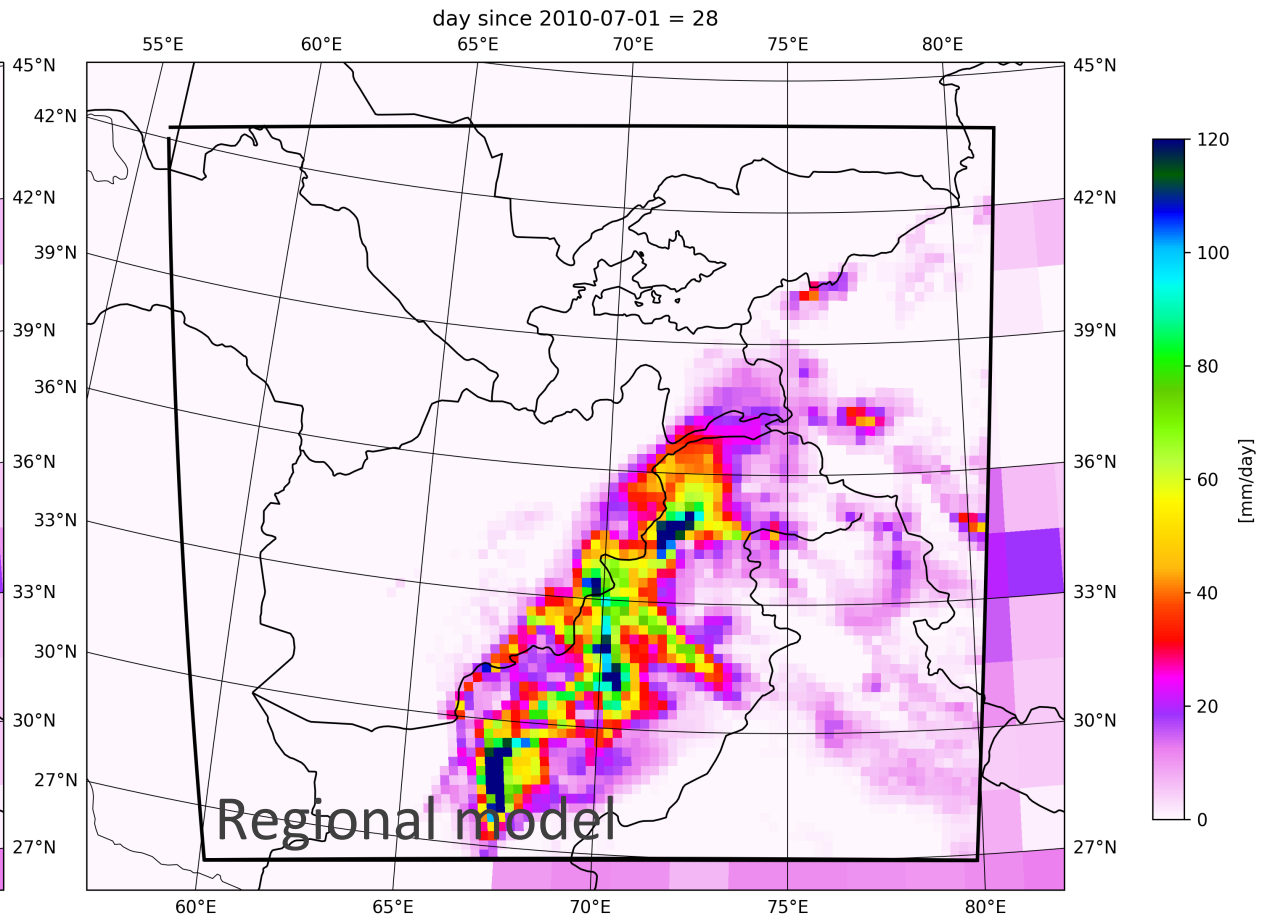

- Climate impact assessment needs local climate information
- Central Asia has a sparse climate observation network
- The topography of CA is very complex
- **Number of regional climate impact studies available in CA**

Challenges – Downscaling with regional models

What we have

What we need

Challenges – Downscaling with statistical models

What we have

What we need

4x4

8x8

16x16

32x32

64x64

topography

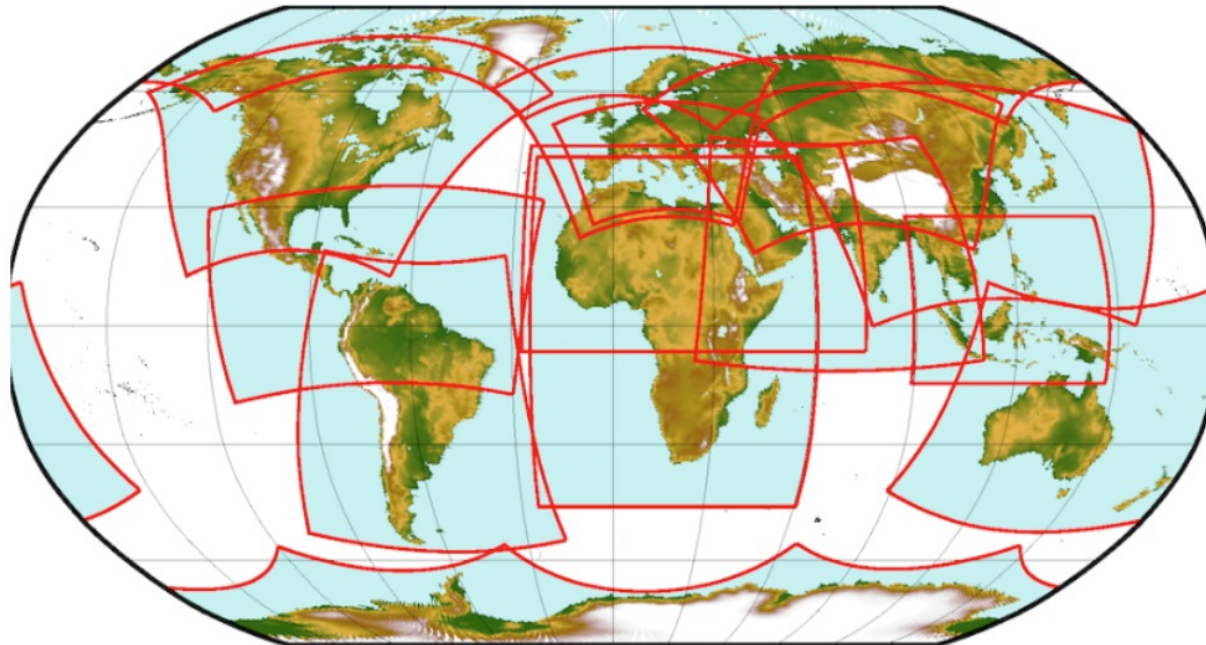

Ensemble mean (5 ISIMIP3b models) of tas ssp585 2070-2100

Challenges

CORDEX CMIP6 downscaling plans

- Central Asia **8** simulations done by PIK
- Europe **193** simulations

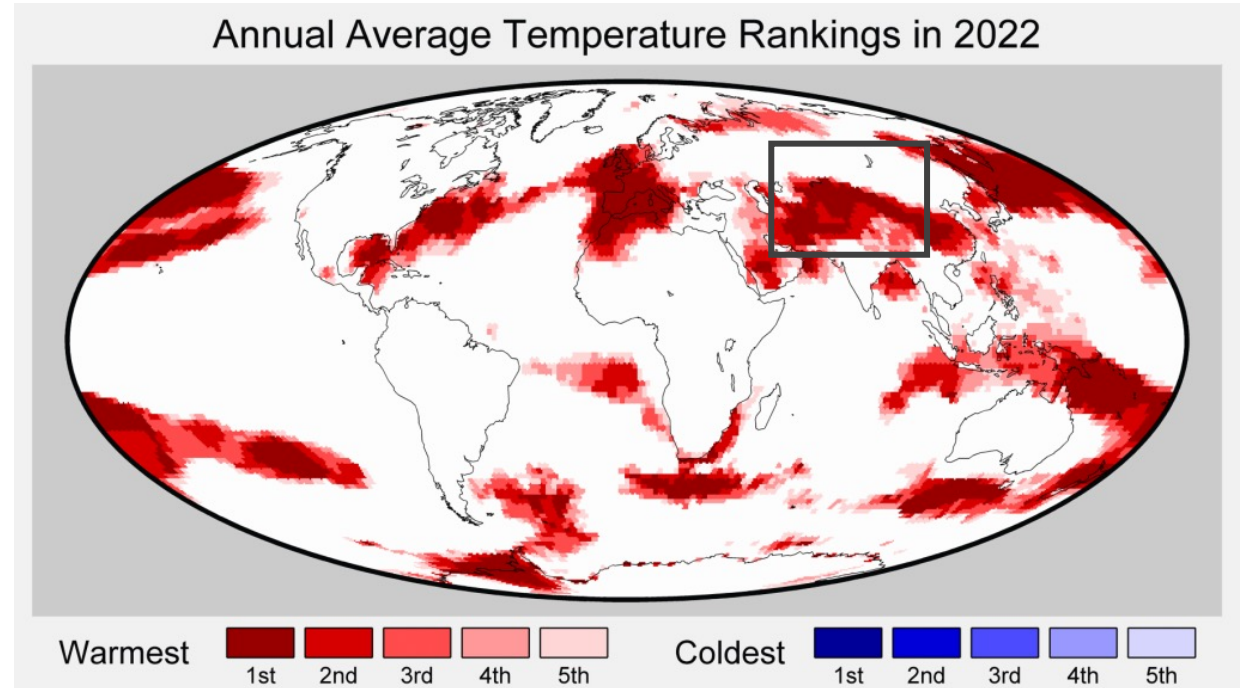

- Region 1: South America
- Region 2: Central America
- Region 3: North America
- Region 4: Africa
- Region 5: Europe (EURO)
- Region 6: South Asia
- Region 7: East Asia
- Region 8: Central Asia
- Region 9: Australasia
- Region 10: Antarctica
- Region 11: Arctic
- Region 12: Mediterranean (MED)
- Region 13: Middle East North Africa (MENA)
- Region 14: South-East Asia (SEA)

Warming trend in CA

©Bijan Fallah, PIK

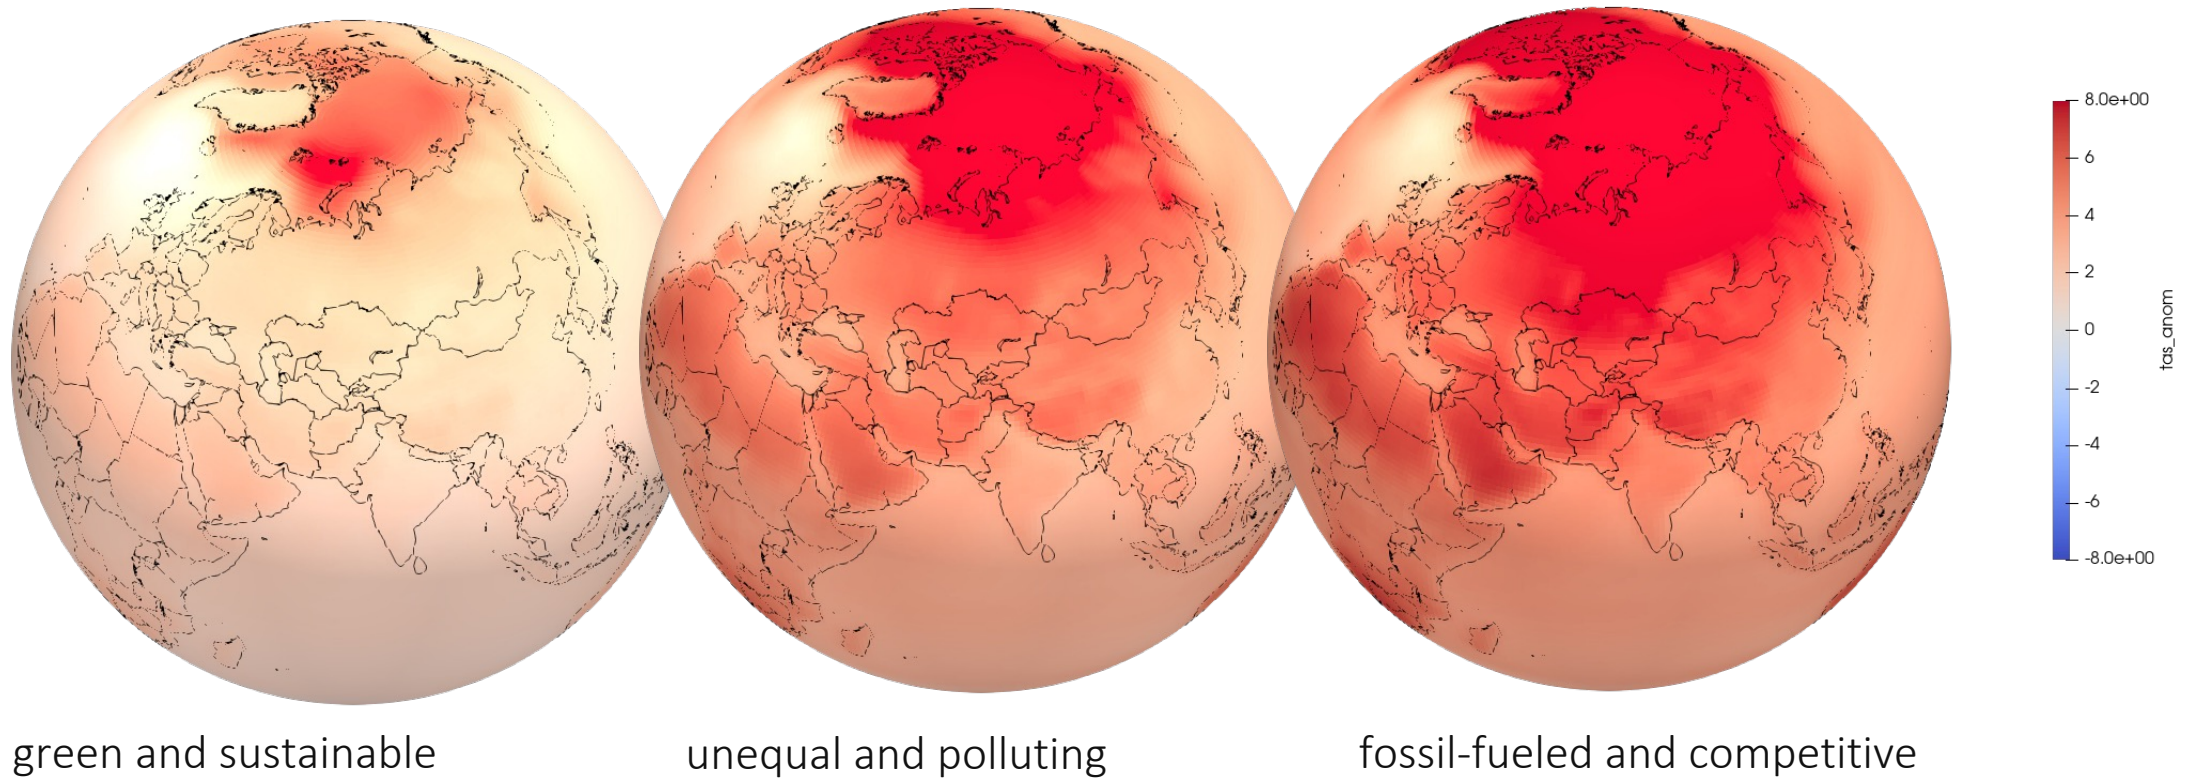

Since 1850

<https://berkeleyearth.org/global-temperature-report-for-2022/>

Projections - Temperature change

Long Term (2081-2100) SSPs (rel. 1850-1900) - Annual (33 models) climate change.

Projections - Total Precipitation change

Long Term (2081-2100) SSPs (rel. 1850-1900) - Annual (33 models) climate change.

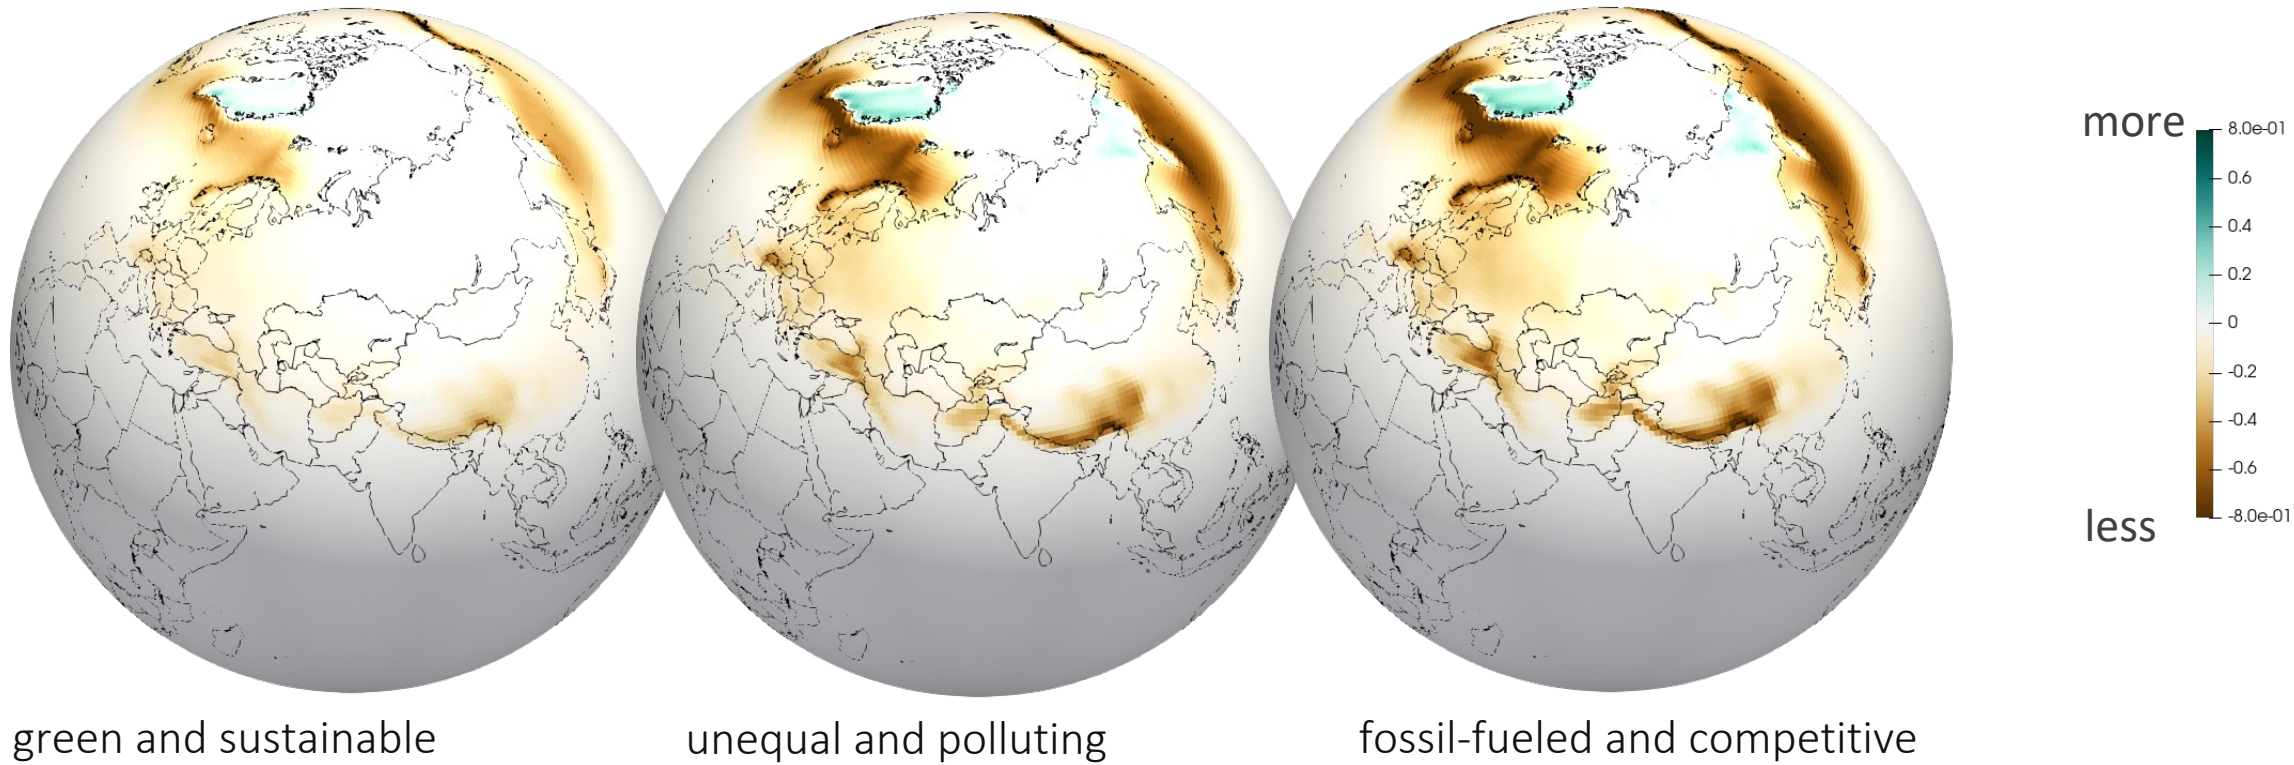

green and sustainable

unequal and polluting

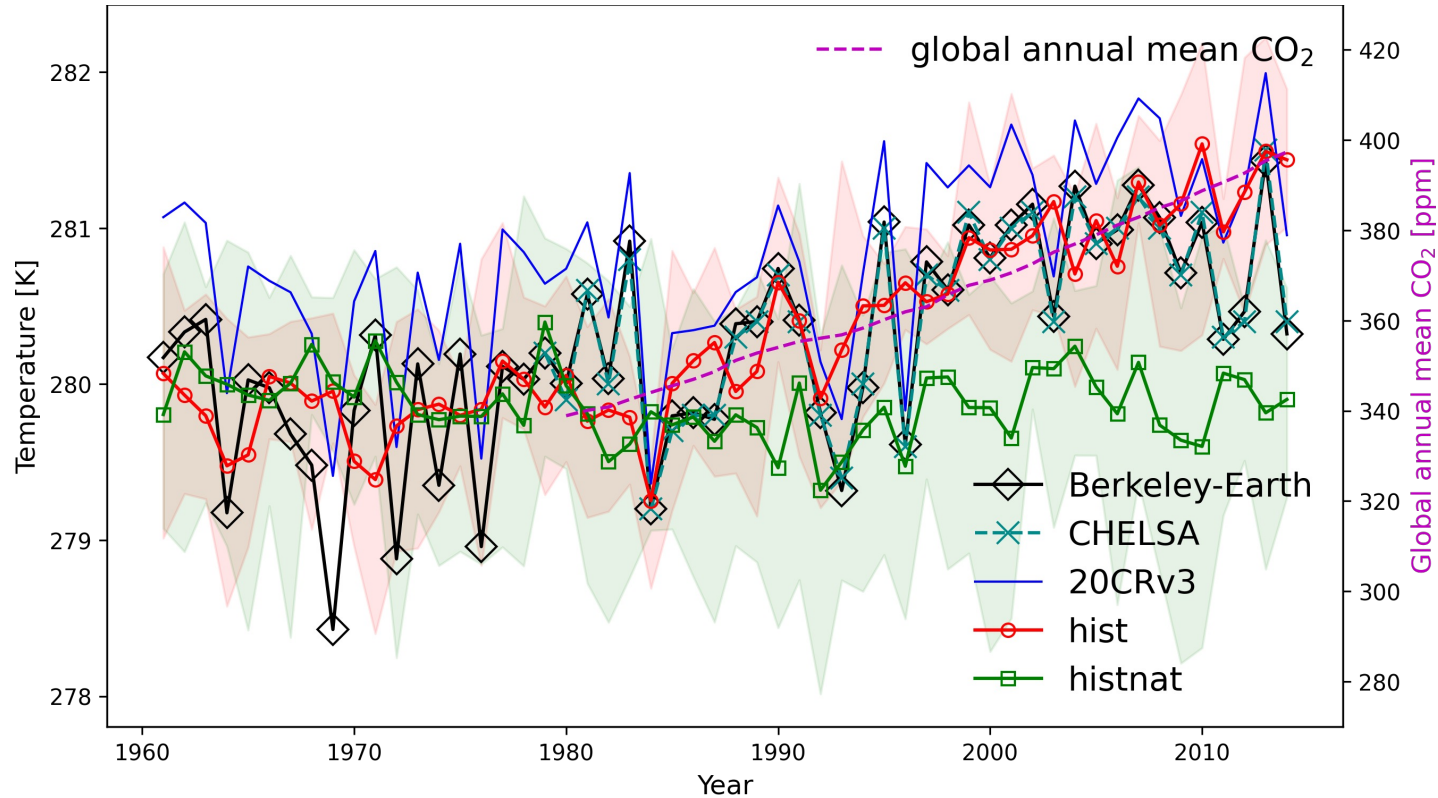

fossil-fueled and competitive

Projections – Snow Fall change

Long Term (2081-2100) SSPs (rel. 1850-1900) - Annual (33 models) climate change.

Human-induced changes?

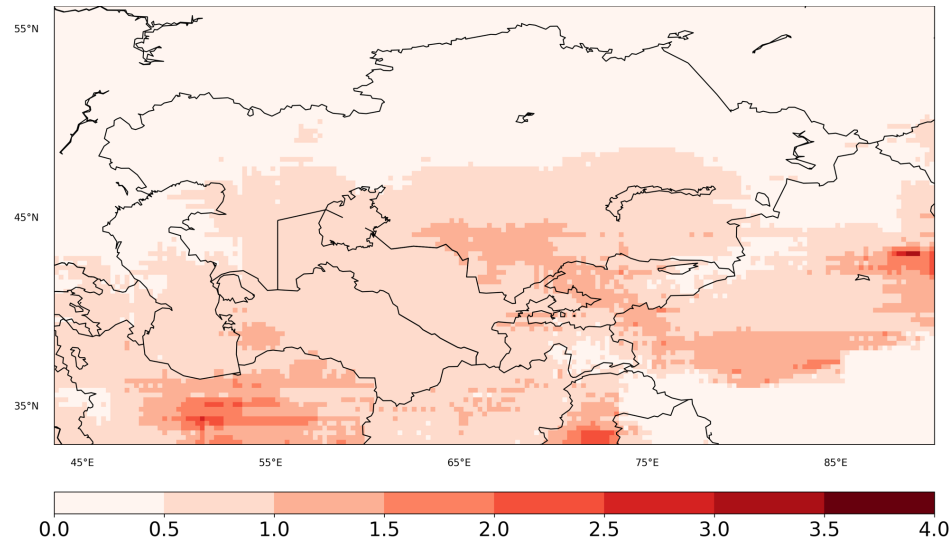

hist = natural + anthropogenic forcing
histnat = natural forcing

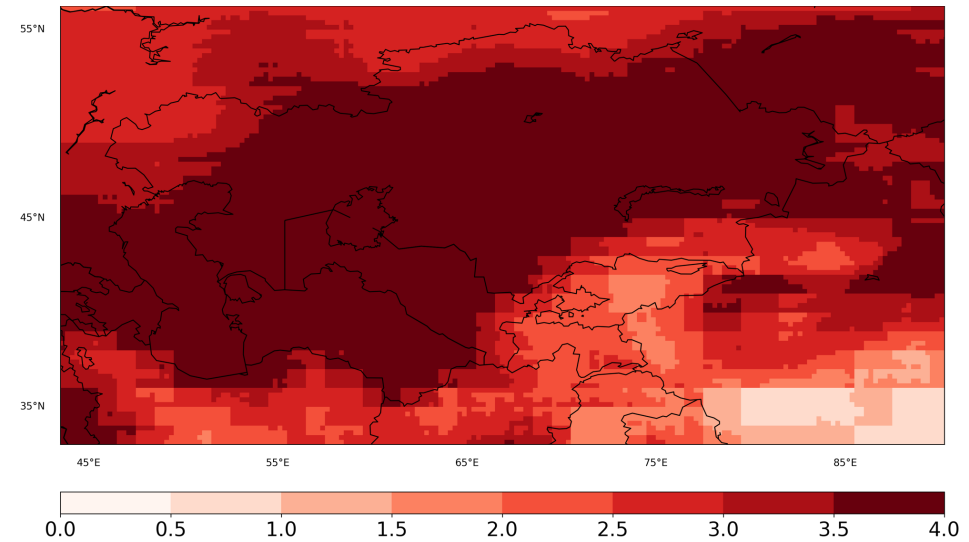

Human-induced changes?

Signal-to-noise ratio $\sim \mu/\sigma$

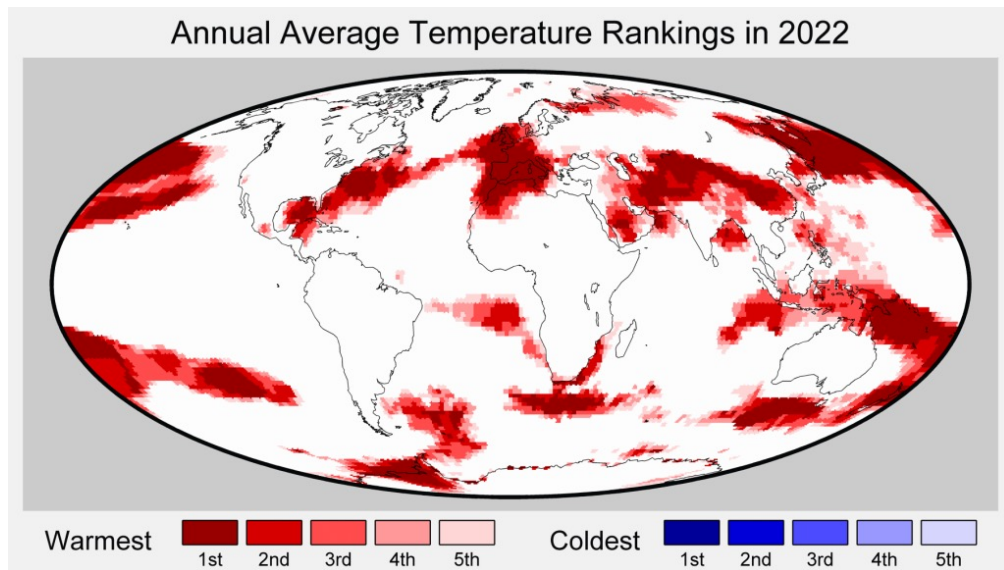

Without Human Activity

With Human Activity

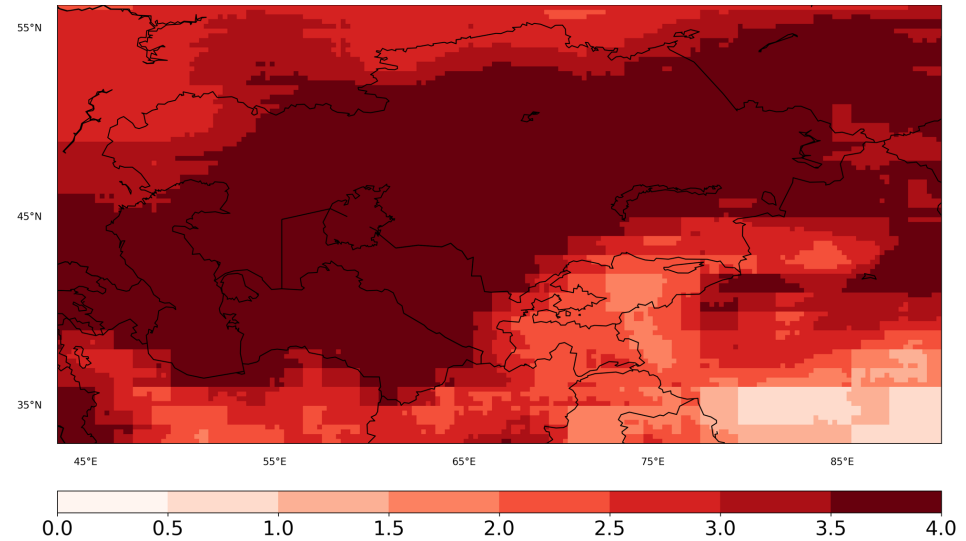

Human-induced changes?

Since 1850

Climate Modelling at PIK

- Increase cooperation with local scientists
- Statistical downscaling and bias adjustment
- Dynamical downscaling using RCMs
- next phase: focus on joint-publications with the local scientists
- Capacity building & Frequent workshops in CA and at PIK
- Flood forecasting
- ...

Thank you

QA

- How can the Potsdam Institute's research help Central Asian countries adapt to climate change, especially dealing with glacier shrinkage and water variability?
- Can you share some insights from your research that could be useful for Central Asia's climate policies?
